

Press release n°1

## The AS 38 automatic inline vacuum sealer

*The automatic vacuum packaging machine*

AS 38 - 1500 Automatic Inline Vacuum Sealer

The AS38 is the flagship model of automatic vacuum packing machines. Its production capacity allowing it to work up to 3 cycles/minute positions this line as **one of the benchmarks on the market**.

Its **high hourly production** (up to 5 seconds less per cycle than the competition) is combined with multiple advantages : **the ergonomics of the workstation** makes it possible to reduce handling, the **tutorials integrated into the control screen** reinforce **simplicity of use** and its design allows easy and **quick cleaning and maintenance**.

In addition to its **robust construction**, there is **security at each packaging stage** throughout the line. Note that the AS 38 models include as standard : pre-cutting, total cutting and suction of "small pieces". The **automatic tensioning of the resistances** of the welding system makes it possible to avoid variations in expansion.

The **AS 38 is customizable** to meet customer requirements. Whatever the configuration chosen, the supply of **spare parts is fast and economical**. This results in **broad fields of application**, suitable for a **multitude of products** : **fresh meat, processed meat, cheese, charcuterie or even fish**. The result obtained is of superior quality.

Combined with a shrink tunnel and a dryer, the AS 38 becomes a **complete automatic thermo-packaging line**.

Do not hesitate to contact us to design the line adapted to your needs !
